

BITMINER

Gold Of The Times BITCOIN

Bitcoin is a digital asset with scarcity comparable to that of gold. However, while there is no upper limit to the supply of gold, Bitcoin's total supply will eventually stabilize at 21 million coins. According to Chainalysis, approximately 20% of the current Bitcoin supply is considered permanently lost due to hard drives being casually discarded or early investors forgetting their passwords.

The value of Bitcoin continues to rise as it gains recognition and widespread use in multiple countries, driven by advancements in technology. While the investment market may experience a bear market in 2023, the scheduled halving of the supply in 2024 will create additional opportunities for investors and miners, potentially leading to greater wealth appreciation.

Challenge MINING DIFFICULTY

A miner's reward for successfully completing a block will be halved from every 210,000 blocks, or an average of every 4 years.

The hard truths of successful people, infused with the pace of the times

START DURING BEAR MARKET!

LOWER HARDWARE COSTS

During a bear market, the prices of mining hardware may be lower because demand from miners tends to decrease. You may be able to acquire equipment at a lower cost.

REDUCED COMPETITION

Some miners may exit the market during a bear market due to reduced profitability, leading to less competition. This could increase your chances of mining rewards if you remain in the game.

LONG-TERM PERSPECTIVE

Mining during a bear market requires a long-term perspective. You may not see immediate profits, but you're positioning yourself for potential gains when the market eventually turns bullish.

CRYPTO ACCUMULATION

Mining during a bear market allows you to accumulate coins at potentially lower costs. If you believe in the long-term potential of the cryptocurrency you're mining, this can be a good strategy for accumulating assets while prices are low.

POTENTIAL FOR FUTURE GAINS

Historically, cryptocurrency markets have gone through cycles of bull and bear markets. Starting mining during a bear market positions miners to potentially benefit from the next bull market when prices and profitability rise.

Forbes Advisor

“Historically, there is a lot of Bitcoin price volatility leading up to and after a halving event, however, the price of Bitcoin typically ends up significantly higher a few months after.”

Mining Model GC41TH

Engineered For Maximum Performance

COMPACT & PORTABLE

The GC41TH miner is lightweight and portable, eliminating the need for bulky graphics cards. It enables you to harness the power of mining with just a computer and an internet connection.

ULTRA-LOW POWER CONSUMPTION

Utilises Swedish chip technology for minimal energy consumption, the GC41TH miner generates minimal heat and consumes less power, maximising profits while reducing energy costs.

BOOSTING PROFITABILITY

With an incredible 41T hashrate, the GC41TH outperforms older-generation products, making digital asset mining effortless and straightforward.

SWEDISH-TECH MULTI-CORE PROCESSOR

The GC41TH miner ushers in a new era of mining with improved synchronisation with multi-core processors, providing you with a mining experience that is both stable and efficient.

THE LATEST BITCOIN MINING TECHNOLOGY

COMPACT | CONVENIENT | COST-EFFECTIVE

FEATURES:

High Hashrate of 41T

Low Power Consumption of Less than 2W

No Complicated Mining Rig Set-Up Procedure

Downloadable Software to Automate Your Mining Process

Innovative Technological Pioneer in Europe Sweden

As per data from Statistics Sweden, the digital sector contributes to 5.8 percent of Sweden's GDP, with over a quarter of a million individuals employed directly in ICT firms. This underscores the significant emphasis that the Swedish government places on this sector. Consequently, numerous innovative tech startups have flourished in the country, attracting substantial investments from major players like Apple, Google, Amazon, Facebook, and more.

Skype

A proprietary telecommunications application company purchased by Microsoft.

Spotify

Audio streaming Podcasting company which favourable by music lover.

Hexagon

Pioneer in Worldwide Digital Reality Solutions which combining sensor, software and autonomous technologies.

Klarna

Fintech company provides online financial payment services.

Northvolt

Specializes in the development and production of batteries focus on lithium-ion technology for electric vehicles.

Cellink

The world's first bioink company, providing a comprehensive range of bioprinters, bioinks, and related products.

Bitminer is also an innovative technological pioneer that has created the palm-sized GC41TH miner, allowing people to easily plug and play to start mining Bitcoin.
